

n8n + Activepieces — Complete Integration Directory

Source-verified inventory from the uploaded ZIPs.

n8n node directories: **308**

Activepieces community pieces: **730**

Combined source entries: **1038**

Normalized cross-project unique names: **925**

Normalized overlaps: **112**

Important: the earlier figure of 934 was not supported by the ZIP directory structure. The ZIPs actually contain 308 n8n node directories and 730 Activepieces community-piece directories in the supplied repositories. Directory names use different conventions, so overlap is calculated separately using a normalized name match. This PDF intentionally does not invent missing integrations or inflate the count to 1,550.

A. n8n — all node/integration directories (308)
